

Sensata

Sensata claims that their “products improve safety, efficiency and comfort for millions of people every day”. But then the question is, what sort of safety, efficiency, and comfort is provided to the millions of working people who have to suffer at the hands of the planes that fly over dropping bombs? These devices would not operate without the various technologies developed by engineers at Sensata. Corporations like Sensata are just another wheel in the cog to **develop more efficient killing machines so that the elites can live in comfort** without worrying about their subjects rising up in resistance—which is only possible through recruiting the engineers at places like UMass.

Infineon

Infineon prides itself in making life “easier, safer, and greener” through their semiconductor solutions. They conveniently leave out the fact that their semiconductor solutions also include manufacturing the brains for missiles used in warfare. They have various subsidiaries to handle this dirty work such as IR HiRel, developing the technology needed for hypersonic munitions to “achieve on-target effectiveness over long ranges.” **The integrated circuits in the next bomb dropped are likely to be from Infineon** and the other semi-conductor businesses that present themselves as an enterprise developing solutions for a greener and safer future, when in reality **they play a key role in terrorizing the masses and upholding the U.S. military presence the world across.**

REAL Handshake Descriptions

Handshake *generously* provides us with descriptions of the companies invited to the career fair, we thought it would be even more generous to provide some honest descriptions of some of the companies present today. The engineering students at UMass are highly sought after by these different companies to enrich the few, no matter the cost.

Raytheon

Raytheon claims to provide “advanced systems and services for commercial, military and government customers worldwide.” They sure do provide advanced systems and services for killing civilians, dissenters, and those determined by different tyrant governments as being in the way of great riches! Take the case of Saudi Arabia, who the U.S. government and Raytheon unapologetically sell weapons to as they continue their bombing campaign over Yemen, pushing the country into ruin and exacerbating the refugee crisis. The company is notorious for its role in **supplying weapons during the long and drawn out U.S. occupation of Afghanistan, which cost the lives of more than 45,000 civilians** (count as of 2021). The indirect toll of this war amounts to 360,000 people, all the while its investors and CEOs continued to get richer and richer! Raytheon continues to milk the U.S. government for cash as the war in Ukraine chugs on **(they recently received over \$625M to replenish stinger missiles)**, with plans to expand defense production “as military leaders look to better protect large, expensive equipment”, while we have to bear the cost of this through inflation and higher taxes.

General Dynamics

General Dynamics is described on Handshake as offering “a powerful and robust portfolio of products, services and solutions that help customers successfully execute their missions in today’s dynamic aerospace and defense environment.” These missions include committing heinous war crimes such as **killing school buses filled with children in Yemen using bombs manufactured by General Dynamics**. They provide the weaponry needed for despotic governments like Saudi Arabia, Israel and the so-called “Great Powers” to carve up the world to enrich themselves. Their portfolio is definitely powerful and robust as a majority (65% as of 2017) of their revenue comes from arms sales! General Dynamics is hungry to use engineering talent at UMass to help the war-mongers in this country fatten the pocket of investors no matter the human toll.
